Subject: City Council Update

We will have a study session to review/discuss some very good information that John brought back from the 2013 Congress of Mayors earlier this month. A copy of the resolutions that were crafted and approved there have been put in your drop box. Please take a moment to review them.

The only action item under the YMA Agenda is to make you aware of certain new year price changes, calculation errors, and omissions associated with the vehicle and equipment purchases you approved last time. A complete list of changes has been provided to you as part of your Council Packet. We are asking you to consider approving a net increase change of \$53,957.01 to complete the purchases previously approved. This item will also be heard under the City Council Agenda.

In Addition to the action item described above, there are two other action items for your consideration under the City Council Agenda. Item 4 asks for your approval of a resolution supporting the application for a grant to assist in converting some of our fleet vehicles to CNG. We have already approved the application but have since found out that one of the unwritten requirements is a resolution. Finally, we are asking you to consider approving an extension of the unit pricing contract for concrete and asphalt paving, drainage, water and sewer projects with Brewer Construction for the final year of our three contract. This arrangement has and is working very well. Brewer's response time and quality of work is very good.
